

Aker Solutions based in St. John's, NL provides front end studies, engineering, asset integrity management, construction, procurement and project management for upstream oil and gas facilities. We are now looking for a **Junior Piping Designer** to strengthen our team.

Responsibilities and Tasks

As a Junior Piping Designer you will support design work for piping and piping support systems.

Responsibilities and tasks include, but not limited to:

- Support the development of engineering deliverables within a multi-discipline team of designers and engineers
- Assist senior designers and engineers with design drawings
- Assist with the preparation of documentation packages and construction drawing sets
- Familiarity of pressure piping design codes and standards with specific knowledge of related CSA, ASME, API and DNV specifications and standards
- Understanding in selection of piping components such as: valves, flanges, adapters, welded interfaces, elbows, bolting, sealing interfaces, gaskets, pipe support hardware.

Qualifications and Personal Qualities

- Candidates should have a diploma in Marine System Design/Mechanical Systems Design
- Use of computer-aided piping design software and techniques
- Knowledge of Microsoft Office applications (Word and Excel)

Behavioral Competencies

- Collaboration – Fosters open dialogue with all project parties, solicits feedback from others
- Accountability – Takes personal responsibility and ownership, fulfils commitments.
- Analyze Issues and Solve Problems – Gather the most important information; listen carefully and attentively to others' opinions and ideas: share information and concepts.
- Planning and Organizing - Manages time effectively; Identifies and organizes resources needed to accomplish tasks; Monitors performance against deadlines and milestones.

Consistent with the Accords Act, residents of Newfoundland and Labrador specifically, and Canadians generally, who are qualified, will be given first consideration for training and employment.
